

WHERE CAN I FIND MY MODEL/SERIAL # INFORMATION AND WHY IS IT SO IMPORTANT?

Every home appliance has a MODEL/SERIAL# tag affixed to the product (do not remove). Without this information we're unable to assume or guess which specific components belong to your model. These number/letter combinations tell us your models exact replacement parts, not *universal* pieces that don't fit/work. From brand to brand, year to year and even model to model parts may differ. The information is not found in use & care booklets and through the years most manuals become lost or misplaced.

Washing Machines

Top Loading Models

Lift open the top lid and look around the opening for the model information

Front Loading Models

Check around the door opening or on the door itself

RANGES

Slide open the storage drawer at the bottom of the range. The model/serial tag may be on the right or left hand side of the range.

Dishwashers

Open the door and the model/serial tag can be on the right or left hand side of the dishwasher tub

Model information for the most common models of top freezer, bottom freezer and side by side refrigerators is located inside towards the top on the right side, left side or top (ceiling) of the fresh food section (not the freezer).

Refrigerators

DRYERS

Stackable Model

Model information can be found around the door opening

Front and Rear Control Models

Model information can be found around the door opening

Microwaves

Check around the outside opening of the door or just inside oven cavity
